Challenge of the Healthcare in rural Taiwan

The Declining Rural Villages

- The Increasing Need for Health Care in the Elderly
- The Problem of Existing Healthcare Facilities
- The Problem of Declining Rural Villages

We need to re-examine the patterns of rural villages and the healthcare in the elderly as a barrier. When the economy is in a recession, the healthcare industry may not operate efficiently due to lower economic returns. This may result in poor medical services and difficulties in accessing healthcare for the elderly. The current healthcare infrastructure needs improvement to provide better services for the elderly in rural areas.

The Future Healthcare Facilities in Rural Taiwan

- Concept: A Self-healing Village
- Situational Analysis in South Taiwan
- Needs of Elderly Health Care: Elderly's Hierarchy of Needs
- Sustainable Strategy on Rural Healthcare Facilities in the Aging Era

The traditional strategy for the elderly in rural areas was unsustainable as they required more medical care and government investment. With a delay in the retirement age, the elderly's hierarchy of needs shifted, requiring different healthcare facilities. Traditionally, healthcare facilities emphasized medical treatment, but now they need to focus on the elderly's needs, such as long-term care and recreation, to provide a better quality of life. The existing healthcare institutions need to adapt to this change, providing affordable options for both the elderly and the government.
**Healthy Energy**

Solar panels and wind generators are applied in this village to provide healthy environment for the elderly. The solar panels on the roof can save the power to the grid. The system of wind generators can provide power for the whole community.

**Healthy Food**

Farmland

Students have biology class by helping elderly do their farmwork. The basketball court is shared with students, elderly and community. Today’s villages in Taiwan is already connected by the highway network. We can easily find an elementary school beside the highway and surrounded by villages, which faces the same problem. The elderly can grow fresh vegetables according to the season and bought other food in the market. Elderly grow fresh vegetables according to the season and bought other food in the market. The grey water from elderly housing is treated in the ecological treatment machine of the cluster. The treated gray water and the harvested rain water irrigate the farmland. The extra problem of water shortage in dry season. The gray water from elderly housing is treated in the ecological treatment machine of the cluster.
